

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Original) A light emitting device comprising:
a thin film transistor on an insulating surface;
an interlayer insulating film over the thin film transistor;
an anode over the interlayer insulating film;
a wiring electrically connected to the thin film transistor and the anode;
a bank over the wiring and the anode;
a first insulating film over the anode and the bank;
an organic compound layer over the anode with the first insulating film interposed therebetween; and
a cathode over the organic compound layer.

2. (Original) A light emitting device comprising:
a thin film transistor on an insulating surface;
an interlayer insulating film over the thin film transistor;
an anode over the interlayer insulating film;
a wiring electrically connected to the thin film transistor and the anode;
a bank over the wiring and the anode;
a first insulating film over the anode and the bank;
an organic compound layer over the anode with the first insulating film interposed therebetween; and
a cathode over the organic compound layer,
wherein the first insulating film is formed from an organic resin film.

3. (Original) A light emitting device comprising:
a thin film transistor on an insulating surface;
an interlayer insulating film over the thin film transistor;
an anode over the interlayer insulating film;
a wiring electrically connected to the thin film transistor and the anode;
a bank over the wiring and the anode;
a first insulating film over the anode and the bank;
an organic compound layer over the anode with the first insulating film interposed therebetween; and
a cathode over the organic compound layer,
wherein the first insulating film is at a film thickness of 1 to 5nm.
4. (Canceled)
5. (Currently Amended) A light emitting device comprising:
a thin film transistor on an insulating surface;
an interlayer insulating film over the thin film transistor;
an anode over the interlayer insulating film;
a wiring electrically connected to the thin film transistor and the anode;
a bank over the wiring and the anode;
a first insulating film over the anode and the bank;
an organic compound layer over the anode with the first insulating film interposed therebetween; and
a cathode over the organic compound layer.
wherein the anode is formed from indium [[thin]] tin oxide.
6. (Currently Amended) A light emitting device comprising:
a thin film transistor on an insulating surface;

an interlayer insulating film over the thin film transistor;
an anode over the interlayer insulating film;
a wiring electrically connected to the thin film transistor and the anode;
a bank over the wiring and the anode;
a first insulating film over the anode and the bank;
an organic compound layer over the anode with the first insulating film interposed therebetween; and
a cathode over the organic compound [[layer.]] layer;
wherein the first insulating film is formed from an organic resin film;
wherein the first insulating film is at a film thickness of 1 to 5nm; and
wherein the anode is formed from indium [[thin]] tin oxide.

7. (Original) A device according to claim 1, wherein an average surface roughness (Ra) of the anode is in a range of 0.9 nm or less.

8. (Original) A device according to claim 1, wherein an average surface roughness (Ra) of the anode is in a range of 0.85 nm or less.

9. (Original) A device according to claim 1, wherein the interlayer insulating film comprises at least one selected from the group consisting of a silicon oxide film, a silicon nitride oxide film and a silicon oxide nitride film.

10. (Original) A device according to claim 1,
wherein the bank is processed by a plasma; and
wherein the bank comprises a hardened film including at least an element selected from the group consisting of hydrogen, nitrogen, halocarbon, hydrogen fluoride, and noble gas.

11. (Original) A device according to claim 1,
wherein a second insulating film is formed over the interlayer insulating film; and
wherein the second insulating film comprises at least one selected from the group consisting of a silicon nitride film and a diamond like carbon film.
12. (Original) A device according to claim 1,
wherein the light emitting device is in combination with an electric device; and
wherein the electric device is one selected from the group consisting of a display,
a digital still camera, a notebook type personal computer, a mobile computer, an image
reproduction apparatus including a recording medium, a goggle type display, a video
camera and a mobile phone.
13. (Original) A device according to claim 2, wherein an average surface
roughness (Ra) of the anode is in a range of 0.9 nm or less.
14. (Original) A device according to claim 2, wherein an average surface
roughness (Ra) of the anode is in a range of 0.85 nm or less.
15. (Original) A device according to claim 2, wherein the interlayer insulating
film comprises at least one selected from the group consisting of a silicon oxide film, a
silicon nitride oxide film and a silicon oxide nitride film.
16. (Original) A device according to claim 2,
wherein the bank is processed by a plasma; and
wherein the bank comprises a hardened film including at least an element
selected from the group consisting of hydrogen, nitrogen, halocarbon, hydrogen
fluoride, and noble gas.

17. (Original) A device according to claim 2,
wherein a second insulating film is formed over the interlayer insulating film; and
wherein the second insulating film comprises at least one selected from the
group consisting of a silicon nitride film and a diamond like carbon film.

18. (Original) A device according to claim 2,
wherein the light emitting device is in combination with an electric device; and
wherein the electric device is one selected from the group consisting of a display,
a digital still camera, a notebook type personal computer, a mobile computer, an image
reproduction apparatus including a recording medium, a goggle type display, a video
camera and a mobile phone.

19. (Original) A device according to claim 3, wherein an average surface
roughness (Ra) of the anode is in a range of 0.9 nm or less.

20. (Original) A device according to claim 3, wherein an average surface
roughness (Ra) of the anode is in a range of 0.85 nm or less.

21. (Original) A device according to claim 3, wherein the interlayer insulating
film comprises at least one selected from the group consisting of a silicon oxide film, a
silicon nitride oxide film and a silicon oxide nitride film.

22. (Original) A device according to claim 3,
wherein the bank is processed by a plasma; and
wherein the bank comprises a hardened film including at least an element
selected from the group consisting of hydrogen, nitrogen, halocarbon, hydrogen
fluoride, and noble gas.

23. (Original) A device according to claim 3,
wherein a second insulating film is formed over the interlayer insulating film; and
wherein the second insulating film comprises at least one selected from the
group consisting of a silicon nitride film and a diamond like carbon film.

24. (Original) A device according to claim 3,
wherein the light emitting device is in combination with an electric device; and
wherein the electric device is one selected from the group consisting of a display,
a digital still camera, a notebook type personal computer, a mobile computer, an image
reproduction apparatus including a recording medium, a goggle type display, a video
camera and a mobile phone.

25.-30. (Canceled)

31. (Original) A device according to claim 5, wherein an average surface
roughness (Ra) of the anode is in a range of 0.9 nm or less.

32. (Original) A device according to claim 5, wherein an average surface
roughness (Ra) of the anode is in a range of 0.85 nm or less.

33. (Original) A device according to claim 5, wherein the interlayer insulating
film comprises at least one selected from the group consisting of a silicon oxide film, a
silicon nitride oxide film and a silicon oxide nitride film.

34. (Original) A device according to claim 5,
wherein the bank is processed by a plasma; and

wherein the bank comprises a hardened film including at least an element selected from the group consisting of hydrogen, nitrogen, halocarbon, hydrogen fluoride, and noble gas.

35. (Original) A device according to claim 5,
wherein a second insulating film is formed over the interlayer insulating film; and
wherein the second insulating film comprises at least one selected from the group consisting of a silicon nitride film and a diamond like carbon film.

36. (Original) A device according to claim 5,
wherein the light emitting device is in combination with an electric device; and
wherein the electric device is one selected from the group consisting of a display, a digital still camera, a notebook type personal computer, a mobile computer, an image reproduction apparatus including a recording medium, a goggle type display, a video camera and a mobile phone.

37. (Original) A device according to claim 6, wherein an average surface roughness (Ra) of the anode is in a range of 0.9 nm or less.

38. (Original) A device according to claim 6, wherein an average surface roughness (Ra) of the anode is in a range of 0.85 nm or less.

39. (Original) A device according to claim 6, wherein the interlayer insulating film comprises at least one selected from the group consisting of a silicon oxide film, a silicon nitride oxide film and a silicon oxide nitride film.

40. (Original) A device according to claim 6,
wherein the bank is processed by a plasma; and

wherein the bank comprises a hardened film including at least an element selected from the group consisting of hydrogen, nitrogen, halocarbon, hydrogen fluoride, and noble gas.

41. (Original) A device according to claim 6,
wherein a second insulating film is formed over the interlayer insulating film; and
wherein the second insulating film comprises at least one selected from the group consisting of a silicon nitride film and a diamond like carbon film.

42. (Original) A device according to claim 6,
wherein the light emitting device is in combination with an electric device; and
wherein the electric device is one selected from the group consisting of a display, a digital still camera, a notebook type personal computer, a mobile computer, an image reproduction apparatus including a recording medium, a goggle type display, a video camera and a mobile phone.

43. (New) A device according to claim 1,
wherein the bank is formed from a resin insulating film.

44. (New) A device according to claim 2,
wherein the bank is formed from a resin insulating film.

45. (New) A device according to claim 3,
wherein the bank is formed from a resin insulating film.

46. (New) A device according to claim 5,
wherein the bank is formed from a resin insulating film.

47. (New) A device according to claim 6,
wherein the bank is formed from a resin insulating film.
